

Project Initialization and Planning Phase

Date	26 June 2026
Team ID	
Project Name	Flood Prediction using Machine Learning
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template):

A customer problem statement helps identify the challenges faced by the end users of the Flood Prediction System. It focuses on understanding the users' needs, difficulties, and concerns so that an effective machine learning solution can be developed. By identifying these challenges, the proposed system aims to provide accurate flood predictions, enabling timely preventive measures, reducing the risk of damage, and improving public safety during flood events.

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A resident living in a flood-prone area.	Predict the possibility of flooding before it occurs.	I do not have an easy and reliable prediction system.	Floods are influenced by multiple weather and rainfall parameters that are difficult to analyze manually.	Concerned about the safety of my family, property, and livelihood.
